

Fondarex SA

On 21 October, our Global Training Tour 2026 continued in Budapest, Hungary.

The session focused on practical knowledge and the advantages of our FX TECHNOLOGY: helping manufacturers produce higher-quality, reliable and cost-efficient metal components by precisely controlling air, temperature and pressure during production.

As we celebrate 80 years of Fondarex, these exchanges reflect our commitment to supporting customers and driving technological progress.

Thank you to everyone who joined us and contributed to the discussion!
