

80 YEARS OF "ACHIEVING CASTINGS WITH QUALITY"

Founded in 1946 in Montreux, Switzerland, Fondarex started as an HPDC foundry and developed its first vacuum system to produce the highest-quality castings. For 50 years, we've advanced vacuum technology, becoming a global benchmark in HPDC.

In recent years, we expanded with Jet Cooling, Power Cooling, and Squeeze systems, reflecting our DNA: "Achieving Castings with Quality."

With over 1,000 customers worldwide, we continue to help foundries achieve top-quality castings, solve porosity challenges, and boost efficiency and sustainability.

To celebrate our 80th anniversary in 2026:

- Global Training Tour – 21 sessions across 14 countries
- Open Day – St-Légier, Switzerland, June 25th, 2026

Thank you to our customers and dedicated employees – together, we're shaping the future of high-performance die casting.

80 YEARS

FONDAREX
