What an incredible FX TECHNOLOGY training day in Monterrey!

As part of our 80th anniversary global training tour, we had the pleasure of bringing together passionate die casting professionals for an in-depth session on vacuum, jet cooling, and squeeze technologies, along with process optimization. The day was filled with practical insights, meaningful discussions, and hands-on knowledge sharing.

A big thank you to all participants for your engagement and valuable exchange – it's this collaboration that continues to drive better casting quality and innovation in our industry.
