

Fondarex and Kamco would like to sincerely thank all participants from South Korea for joining us at this outstanding event in Ulsan on May 14.

We were delighted by the strong interest in our latest generation of vacuum, jet cooling, and squeeze technologies, as well as the engaging discussions on how these solutions can help achieve more stable production processes and higher casting quality.

The journey continues with our upcoming training and event stops:

June 11–12 — SWEDEN / Värnamo – FX TECHNOLOGY Training

July 15–17 — CHINA / Shanghai – China Die Casting Exhibition

We look forward to continuing the exchange of knowledge and innovation with partners and customers around the world.
