

Fondarex SA

We are currently working alongside Clément, a talented diploma student from HFTM (University of Applied Sciences) in Biel/Bienne, on the conceptual design for a new Fondarex solution for the pressure die casting industry.

This new technology is designed to complement our FX VAC, FX JET, and FX SQUEEZE systems. Building on Fondarex's commitment to innovation, this project aims to enhance process stability and casting quality by tackling gas and shrinkage porosities through advanced competitive solutions.
